Art Unit: 1773

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 39, 41, 43-49, drawn to a composite, classified in class 428, subclass 457+.
 - II. Claims 40, 42, 73-76, drawn to a composite with display medium, classified in class 428, subclass 1.1+.
 - III. Claims 50-65, 70-72, and 77-78, drawn to a method of producing a composite display, classified in class 427, subclass 457+.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the subcombination requires a plastic substrate wherein the combination does not require a plastic substrate and can be a substrate of any material. The subcombination has separate utility such as a packaging material.
3. Inventions III and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product can be made by a materially different process in the absence of vacuum deposition such as by cast coating or lamination of individual pre-formed layers.

Art Unit: 1773

4. Inventions III and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product can be made by a materially different process in the absence of vacuum deposition such as by cast coating or lamination of individual pre-formed layers.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Monique R Jackson whose telephone number is 703-308-0428. The examiner can normally be reached on Mondays-Thursdays, 8:00AM-4:30PM.
